

Aluminum Ledger (MAL)

The Mills Versa Light™ Ledgers and Transoms are made using our patented tubular extrusion along with our patented mouth piece which allows for equal strength to that of our Versa™ steel version with a substantial reduction in weight. Thus providing a significant reduction in strain and fatigue for optimum worker productivity. Raised horizontal ribs longitudinally located top and bottom of extrusion allow for secure grip while handling as well as fixed seating of scaffold planks and platforms.

Colour: Mill Finish

Size: Industry Standard Lengths

Custom sizes and colours available upon request.
